PART 01

Goal & Action Plan

From Raw Chaos to Clear Insights

Our mission: transform a sprawling, error-filled election CSV into an interactive Power BI dashboard. We aimed to answer strategic questions instantly, enabling non-technical users to explore vast electoral data without writing a single query.

3 Billion

Cumulative Votes

1,600+

Unique Parties

5,600

Constituencies

Four-Step Journey to Dashboard

1

Data Ingestion

Started with a raw, public Kaggle dataset.

2

Data Cleaning

Merged variants like "B.J.P." & "Bharatiya Janata Party".

3

DAX Calculations

Created measures for votes, turnout %, and seats.

4

Dashboard Assembly

Arranged visuals into a cohesive, filterable story.

PART 02

Dashboard Walkthrough

KPIs & Filters at a Glance

Synchronized Filters

Slicers at the top for Year, Party, State, and Constituency ensure every visual updates instantly for dynamic exploration.

- Year
- Party
- State
- Constituency

Key Performance Indicators

3B+

Total Votes

1.6K+

Parties

5.6K+

Seats

Top Performers

Independents hold the largest seat share, while **Uttar Pradesh** is the dominant battleground state.

States & Parties: A Visual Ranking

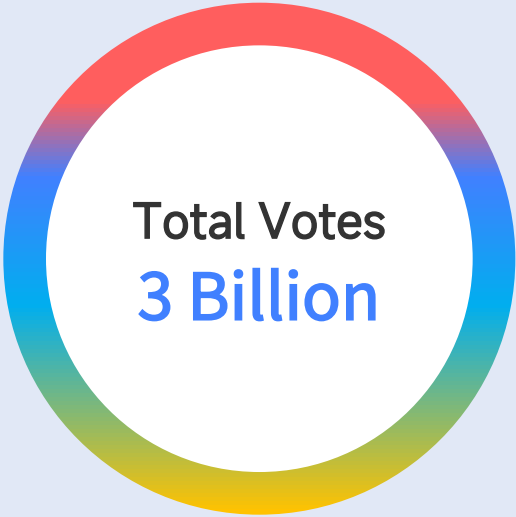

Top States by Seats Won (Funnel)

Confirms Uttar Pradesh at the apex, trailed by Bihar and Maharashtra.

Party Vote Share (Pie)

Breaks down the 3-billion-vote pie among key players.

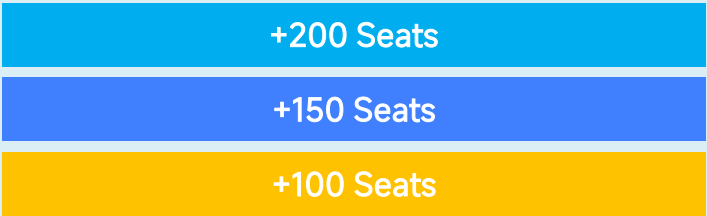

Independents: 84K
Congress: 35K

BJP: 53K
Others

Temporal Trends Uncovered

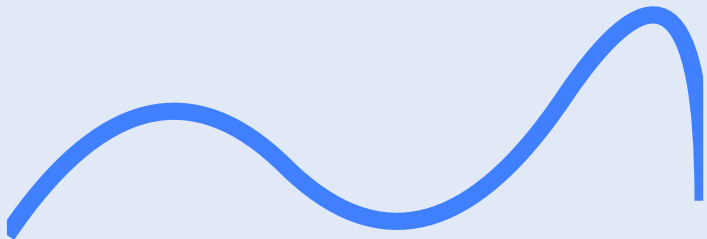

Seats Won (Waterfall)

Tracks seat expansion across election cycles.

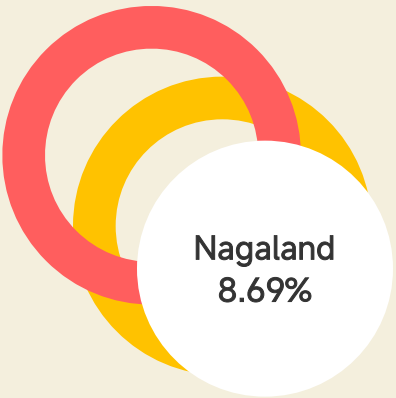

Total Votes (Line)

Exposes cyclical peaks aligned with general elections.

Voter Turnout (Donut)

Spotlights leaders like Nagaland (8.69%).

Granular Table for Deep Drill-Down

State-wise Party Seat Distribution

A sortable matrix for cell-level evidence. Search "Delhi" to find AACP won 59 seats and AAP won 4.

Delhi	AACP	59
Delhi	AAP	4
Uttar Pradesh	BJP	275
Maharashtra	Shiv Sena	18

PART 03

Lessons & Next Steps

Hurdles We Overcame & Lessons Learned

Challenges

Messy Data: Standardizing 1,600 party name variants consumed most of our cleaning hours.

Complex DAX: Crafting accurate turnout formulas required iterative debugging.

Chart Choice: Debates ended when a funnel chart outperformed a treemap for clarity.

Lessons Learned

Clean data is key: Every insight inherits upstream errors. It's the non-negotiable foundation.

Simplicity trumps decoration: Choose visuals that answer a single question fast.

Teamwork is essential: Divide labor (cleaning, DAX, design) and integrate early.

Future Enhancements Ahead

Interactive India Map

Add a synchronized map for geographic drill-down by constituency.

Predictive Forecasting

Build a time-series model to project future voter turnout.

Social Media Sentiment

Overlay Twitter data to correlate buzz with ballot results.

Web Publication

Publish the dashboard online for public access and feedback.

Key Takeaways

Data Quality is Paramount

Clean data is the non-negotiable foundation. Every downstream insight inherits upstream errors. Invest time in meticulous preparation.

Focus on Narrative Clarity

Choose visuals that answer a single question fast. Layer complexity only on demand. A clear story is more powerful than a decorative one.

Embrace Collaborative Workflows

Divide labor (wrangling, DAX, design) and integrate early. Document assumptions so others can replicate and extend your work.

THANK YOU!
